

## New sagittal attachment of CEKA PRECI-LINE

To offer a solution in close bite situations, a spherical male was developed in 3 versions and 2 sizes ( $\varnothing$  1.7 mm and 2.2 mm). The iglo-shaped female in polyacetal, available in 3 different levels of retention, snaps audibly into place and ensures the patient of the correct seat of his prosthesis.

A duplicating dummy of isolating material is also used as a processing female.

The males are available in burn-out plastic, in NOPRAX alloy (for casting with non-precious alloys) and in a  $\varnothing$  2.2 mm threadable version for bar constructions.

Two complete intro kits (22 pieces) contain plastic or cast-on males in both sizes and 2 accessories (paralleling mandrel and insertion tool), universal for both sizes.
